Help

In English:

the magnetic alternating field, which is taken up by the coil 9, produced by coil 11, produces therein an alternating voltage. as a result of the parallel switched condenser 9a arises a resonant circuit, which is co-ordinated with frequency the magnetic alternating field. of reel delivered alternating voltage an electric rectifier 6 one supplies, from it the operating voltage for the modulator 7a as well as over the line 5 for the circuit part 2 one produces.

A screenshot of a Google Translate web interface. The top section is a large, empty white rectangular box for text input. Below this box is a horizontal bar containing a search icon on the left and a 'Translate' button on the right. The 'Translate' button is a rounded rectangle with a blue gradient and the word 'Translate' in white text. To the right of the main input area, there is a vertical sidebar with several icons, including a magnifying glass, a document, and a speech bubble.

A screenshot of a Windows XP desktop environment. The desktop is mostly white with a few icons. In the bottom right corner, there is a dark rectangular button with the word "Translate" in white text. To the left of this button is a small icon of a document with a magnifying glass. The taskbar is visible at the bottom, and the Start button is on the left. The window title bar at the top shows "Microsoft Word - Document1.docx".

PATENT ABSTRACTS OF JAPAN

(11)Publication number : 2001-159948

(43)Date of publication of application : 12.06.2001

(51)Int.Cl.

G06F 3/033

(21)Application number : 11-376161

(71)Applicant : BAITEKKUSU:KK

(22)Date of filing : 01.12.1999

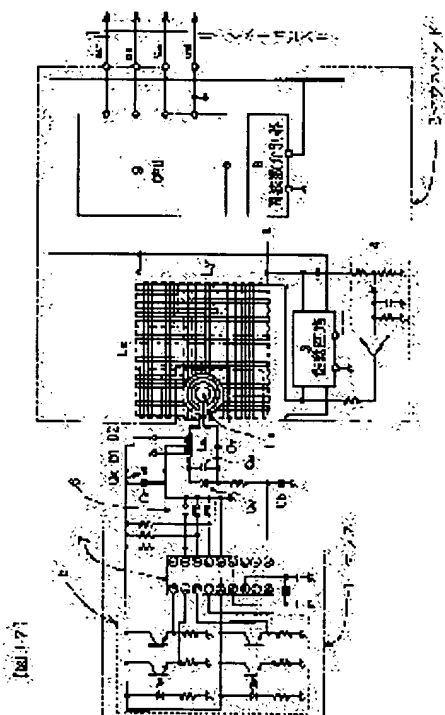

(72)Inventor : SHIMONO HEIHACHI

(54) BATTERYLESS CORD-FREE MOUSE DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To wirelessly transmit the information of a computer mouse having cord-free constitution and to wirelessly transmit power supply for the mouse to the mouse.

SOLUTION: An oscillator is constituted by unifying the cord-free mouse with a mouse pad, and the oscillation frequency of the oscillator is determined by a constant of a resonance circuit in the mouse. Part of oscillation voltage is rectified in the mouse and used for mouse power supply. The information of an encoder or a button switch in the mouse is encoded by a CPU built in the mouse. The HI/LO voltage of the code is applied to a varactor diode constituting part of the resonance circuit to frequency-modulate the oscillation frequency. The modulated wave is taken out by the mouse pad side and demodulated by a frequency discriminator built in the mouse pad and the demodulated wave is transmitted to a computer through a CPU built in the mouse pad.
